EDUCATION

MIVA UNIVERSITY

BSc Economics

Lagos, Nigeria

Expected 2028

UNIVERSITY OF LAGOS

BSc (Hons) Accounting

Lagos, Nigeria

Feb 2026

- Activities and Societies: Google Developer Student Club, Capital Edge Society, The Investment Society, Lagos Model UN

WORK EXPERIENCE

ALAT

Lagos, Nigeria

Developer Relations Intern, ALAT Engineering

May 2026 – Aug 2026

- Built **Binco**, a customer-facing onboarding demo (Flask) integrating real ALAT Partnership API flows end-to-end: BVN/NIN wallet creation, OTP consent, KYC tiering (Tier 1–3), and a transaction layer (transfers, airtime) with pre-debit name enquiry
- Authored two partner integration guides: a full developer reference across the ALAT OpenAPI suite, and a beginner guide with Postman walkthroughs and a go-live checklist, plus flowcharts for five core flows (wallet creation, account upgrade, bills payment, transfers, BNPL)
- Implemented ALAT's asynchronous wallet-creation flow, hosted a face-biometric redirect returning a correlationId, completed account delivery via webhook callback, and ran the app in functionally identical mock and live modes

Payments Intern, ALATPay

Nov 2025 – May 2026

- Investigated transaction failures and data inconsistencies across payment lifecycles, tracing root causes to support reliability and reduce manual intervention
- Ran competitor analysis on gateway onboarding flows, identifying ALATPay's frontloaded 4–5 page KYC signup as a conversion drag versus competitors' progressive-KYC email/password gate
- Proposed and helped ship a single-page signup with a pre-verification sandbox (in active development); wrote user stories and facilitated redesign workshops with engineering

WEMA Bank

Lagos, Nigeria

Finance Intern, Financial Control Division

May 2025 – Jul 2025

- Cleaned, validated, and structured financial datasets used for statutory and regulatory submissions, ensuring accuracy and consistency across reporting workflows
- Built a scalable data tool classifying H1 2025 fixed-asset purchases across 149 branches nationwide, improving reconciliation efficiency and asset-tracking accuracy

LEADERSHIP, COMMUNITY & TEACHING

- Top 5 national ranking in a live securities trading competition (10% stop loss, 5M AUM), applied technical problem-solving and data-driven solutions under real constraints

Capital Edge Society, University of Lagos

Lagos, Nigeria

President, Head of Research & Investment Strategy

Sep 2024 – Aug 2025

- Founded and led a fintech-focused finance society, training 75+ students in technical and professional skills and managing a 25+ member network through market briefings, literacy workshops, mentorships and career bootcamps
- Spearheaded fintech case challenges, including a blockchain study on cross-border payments and a stablecoin case challenge in Africa, where participants researched, pitched and presented innovative settlement solutions

The Investment Society, UNILAG

Lagos, Nigeria

Fund Associate

Jan 2022 – Aug 2025

- Designed and delivered an introductory curriculum on quantitative investment analysis, leading sessions in Excel and Python to calculate returns, assess risk and test simple trading/portfolio strategies
- Collaborated with 5 analysts to produce macroeconomic research and co-authored reports on Nigerian monetary policy and global trade trends, delivering buy/sell recommendations informed by CPI, ISM, PMI, GDP, and employment data
- Built a Python-based portfolio risk calculator using historical price data to analyse returns and volatility, revamped the society's website, improving internal risk analysis and boosting content visibility and engagement

PROJECTS

EscrowPay - FastAPI, PostgreSQL, Next.js, Nomba API · [\[Live\]](#) · [\[GitHub\]](#)

- Built a buyer-protection escrow layer for Nigerian P2P commerce, solving the trust problem in Instagram/WhatsApp transactions; funds sit in a dedicated virtual account and are released to the seller only on buyer confirmation
- Implemented a nine-state deal-machine (CREATED → FUNDED → SHIPPED → CONFIRMED → RELEASED, with DISPUTED, CANCELLED, REFUNDED, EXPIRED) across 10 endpoints, with edge case handling: underfunding accumulation across partial payments, duplicate webhook idempotency via transaction ID deduplication, HMAC-SHA256 signature verification, and name-matched payout validation
- Deployed FastAPI + async PostgreSQL (Railway) and Next.js (Vercel), with role-aware buyer/seller dashboards and APScheduler for configurable auto-release (1hr–30 days)
- Paired with Claude as an AI coding assistant: scoped the nine-state contract, edge cases, and product decisions independently; used Claude for scaffolding, reviewing and correcting generated logic, including switching float to Decimal across monetary fields for financial precision

Partner Portal - Flask, Python · [\[GitHub\]](#)

- Built a partner-facing management console in Flask for administering ALAT API access: authentication, sandbox/production credential management, and a five-stage partner onboarding flow with per-product state tracking

- Added a logs & analytics module with request/response inspection, error aggregation, and an async flow tracker following correlation IDs from wallet creation through to webhook delivery across ALAT endpoints (BNPL eligibility, BVN/NIN account creation, KYC status, transfers)

TECHNICAL SKILLS AND INTERESTS

Languages and Frameworks: Python; SQL; JavaScript; Flask; FastAPI; Next.js/React

Backend & Tools: Git; Linux; PostgreSQL; REST APIs; webhooks; Railway; Vercel; HMAC

Spoken: English (Native); French (Basic); German (Basic)
